

GERMAN ACTIONS (3.4)

Summary. The flowchart below details the following. It is the Germans' turn to play if the current Event card has the *German Action Phase* at the top (and there are German Troops either on map or Available). Roll 1d6: on 1-3, the Germans conduct an action before the Factions, [on 4-6](#), after the Factions. Then, first, if a Coordinate marker is in play (4.2.4), the Senate player decides all details of the German Action Phase. Otherwise, if any of their Troops are in the German Forces box and none are on the map, the Germans will move all Troops from the box to a random German Landing Site (also place a News marker there), otherwise to where there are Germans on the map already. If none of the above, the Germans will Attack if in a space with Reds and/or Russians. If no German action occurred yet, the Germans will March closer to enemy Cells (ignoring Moderates). Within all of the above, whenever there are remaining options, all selections are random.

Attack. Conduct the Attack procedure (3.2.5) with Germany as the Attacker.

Note: German minimum Attack Strength is two.

March. Move all German pieces in the origin to an adjacent space with or closer to enemy (ignoring Moderates).

Landing. Place all German Troops from their Available box to a random Landing Site on the map. The Landing Sites are marked by printed German flags and have a die roll range associated with them. Place available News (3.3.2) in the Landing space.
